This too slipped through the cracks. I think the answer to the other follow-up should cover it. In practice, of course, what you notice is that air friction makes

less difference for the heavier object.  
Mike W. (published on 08/07/2012)

[kinematics - physics.stackexchange.com](http://kinematics - physics.stackexchange.com)

On the Physics Subject test, you lose 1/4 of a point for every question you answer incorrectly. If you can't eliminate any answer choices, you should leave the question blank and avoid a point deduction, but if you can eliminate at least one wrong answer, then you're better off making your best guess.

[Experiment in Physics \(Stanford Encyclopedia of Philosophy\)](#)

and we get Wien's frequency displacement law...  $f_{\max} = b'T$ . Discuss effective temperature. No object emits a mathematically perfect blackbody radiation spectrum. There will always be lumps in the curve. Set the area under intensity-wavelength curve for a real source of radiation equal to the area under the intensity-wavelength curve for an ideal blackbody and solve for temperature.
